Startup

ANALYSIS

	% w/w	Appearance:	Liquid
Calcium (Ca)	5.1 %	Color:	Light brown
Molybdenum (Mo)	0.0024 %	pH:	4 - 5
Derived from: Calcium Acetate, Sodium Molybdate		Organic matter	<12 %
		Density at 68°F/20 °C:	9.26 - 9.68 lbs./gal 1.11 - 1.16 kg/l

DESCRIPTION

The BQ fertilizer line consists of six products which form a complete program for growing plants from start to harvest. BQ Startup is a highly concentrated natural calcium fertilizer. Due to the unique production process, the nutrients are 100% present in solution and can therefore be taken up directly by the plant through foliar application as well as irrigation. The nutrients are sourced from plant-based materials.

Due to its low organic matter content and 100% solubility, BQ Startup is ideal for use in irrigation systems.

APPLICATION

Use 3.3 ml BQ Startup per liter irrigation water weekly (1:300 dilution, 0.43 fl.oz. per gal).

Caution: This fertilizer contains Molybdenum and should be used only as recommended. It may prove harmful when misused.

It is advised to always have an expert make a fertilization plan and to start with a test application. No guarantees can be given in the event of incorrect use.

STORAGE

Store in a dark and dry location at 10 and 25°C (50 - 77 °F).
Shelf life 1.5 - 2 years.

PACKAGING

0.25 - 0.5 - 1 - 10 - 20 - 220 - 1000 liter
8.45 - 16.91 - 33.81 fl. oz., 2.64 - 5.28 - 58.1 - 264.2 gal
